

Q1. Create an external table in the default database on data orders which has order id, customer id and order date.

Ans:

```
CREATE EXTERNAL TABLE orders(  
  order_id INT,  
  customer_id INT,  
  order_date TIMESTAMPT  
)
```

```
row format delimited  
fields terminated by ','  
location '/user/training/ironhack/loudacre/orders'
```

Q2. Create a Hive or Impala table on data in the training materials 'base_stations.tsvt' . (Hint: Load the data directly on the table)

Ans:

```
CREATE EXTERNAL TABLE base_station(  
  station_num INT,  
  Zipcode INT,  
  city string,  
  state string,  
  latitude float,  
  longitude float  
)
```

```
row format delimited  
fields terminated by '  
location '/user/training/ironhack/loudacre/base_station'
```

Q3. Using Sqoop import the customerservicerep table directly in hive metastore.

Ans:

```
sqoop import --connect jdbc:mysql://localhost/loudacre --username training --password training --  
table customerservicerep --hive-import
```

Ans:

```
create external table account_avro
stored as AVRO
location '/user/training/ironhack/loudacre/accavroformat'
TBLPROPERTIES ('avro.schema.url' = '/user/training/ironhack/loudacre/accountsSchema.avsc')
```

Ans:

Q6. Create a table directly from the metastore.

Ans:

The screenshot shows the Hue Metastore Manager interface. The browser tabs include 'Hue - Metastore Man...', 'Hue - File Browser', and 'Hue - Impala - Query'. The address bar shows 'http://localhost:8888/reeswax/create/create_table/default'. The navigation bar includes 'Hue', 'Query Editors', 'Data Browsers', 'Workflows', and 'File Browser'. The main header is 'Metastore Manager'. The left sidebar shows a tree view with 'SQL' and 'default' databases, and a list of tables: 'account_avro', 'base_station', 'customerservice', 'device', 'names', 'orders', and 'webpage_info'. The main content area is titled 'Databases > default > Create a new table manually'. It shows a progress bar with six steps: 'Step 1: Name', 'Step 2: Record Format', 'Step 3: Serialization', 'Step 4: File Format', 'Step 5: Location', and 'Step 6: Columns'. The 'Step 1: Name' section is active, with the title 'Create a table'. Below the title, it says 'Let's start with a name and description for where we'll store your data.' There are two input fields: 'Table Name' with the value 'customer' and 'Description' with the value 'Customer table for metastore'. Below the description field, it says 'Use a table comment to describe your table. For example, note the data's provenance and any caveats users need to know.' A 'Next' button is at the bottom left.

Table Name:

Description:
